FACILITY LOCATIONS ( Sites ) - See Attached Listing

REPORT OF ANIMALS USED BY OR UNDER CONTROL OF RESEARCH FACILITY ( Attach additional sheets if necessary or use APHIS Form 7023A )

A. Animals Covered By The Animal Welfare Regulations	B. Number of animals being bred, conditioned, or held for use in teaching, testing, experiments, research, or surgery but not yet used for such purposes.	C. Number of animals upon which teaching, research, experiments, or tests were conducted involving no pain, distress, or use of pain-relieving drugs.	D. Number of animals upon which experiments, teaching, research, surgery, or tests were conducted involving accompanying pain or distress to the animals an for which appropriate anesthetic, analgesic, or tranquilizing drugs were used.	E. Number of animals upon which teaching, experiments, research, surgery or tests were conducted involving accompanying pain or distress to the animals and for wh the use of appropriate anesthetic, analgesic, or tranquiliz drugs would have adversely affected the procedures, results, or interpretation of the teaching, research, experiments, surgery, or tests. ( An explanation of the procedures producing pain or distress in these animals a the reasons such drugs were not used must be attached this report ).	F. TOTAL NUMBER OF ANIMALS  ( COLUMNS C + D + E )
4. Dogs					
5. Cats					
6. Guinea Pigs					
7. Hamsters					
8. Rabbits	2	12	63		
9. Non-human Primates					75
10. Sheep					
11. Pigs					
12. Other Farm Animals					
13. Other Animals					

ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.

---	--	---------------------------

## **EXCEPTIONS TO USDA REGULATIONS**

**Reviewed and approved by the GSU IACUC most recently on 10/24/03**

### **3.28(b)(3)(i)**

"The interior height of any primary enclosure used to confine hamsters shall be at least 6 inches."

We sometimes house dwarf hamsters in 5 inch cages because it is documented that 6 inch cages are detrimental to their growth [Gilman WC, et.al "Effect of the New USDA Cage Height Standard on Body Weights of Weanling and Djungarian Dwarf Hamsters (*Phodopus sungorus*). *Contemporary Topics in Lab An Sci*, 32(1): 17-19, 1993.]

Number of animals affected: 2,096

### **3.28(b)(3)(ii)**

"A nursing female hamster, together with her litter, shall be housed in a primary enclosure which contains no other hamsters..."

All of our breeding female dwarf hamsters with litters are housed with the adult male sire because our experience is that, unlike common golden hamsters, the Siberian dwarf hamster male is not injured by the female and he participates in the rearing of the young such that pup survival is higher when the sire is present.

Number of animals affected: 168 females

### **3.31(a)(1)**

"[Hamster] enclosures shall be sanitized at least once every 2 weeks..."

We sometimes do not change hamster cages for up to maximally 4 weeks due to the experimental needs of IACUC-approved research involving territorial aggression and circadian rhythms

Number of animals affected: 339

### **Policy #12**

"When a database search is the primary means of meeting [the requirement to search for alternatives], the narrative must, at a minimum, include...the period covered by the search."

If an entire database is searched it may not be possible to determine the period covered by the search. For example, The National Library of Medicine's "PubMed" database goes back to 1966 for some major journals, but coverage of other journals begins in various different years not necessarily starting with the earliest year that the journal was published. Therefore, instead of reporting the period covered by the search we require a statement that the entire database was searched without time limitations on a particular date.

Guide p. 18

"Zoonosis surveillance should be a part of an occupational-health program."  
Because rabbits and some rodents are purchased from vendors who guarantee them free from known zoonotic agents, zoonosis surveillance is not done routinely. The wild derived rodent colonies at GSU have repeatedly tested negative for zoonotic agents. Ferrets are vaccinated against rabies by the vendor. Ferrets born in house are not vaccinated for rabies due to exclusion of potential transmitters of this disease from the facilities.

Guide p. 40

"Watering devices, such as drinking tubes...should be checked daily to ensure their proper maintenance, cleanliness, and operation."

Even if we had the personnel to shake every water bottle every day of the year, this would probably not be a good use of time. Instead our SOP for daily room checks includes the following statement: "Visually check the health and condition of each animal. Compare the water level in the bottles and elimination and consumption in each cage relative to the others. If any animal appears to be eating, drinking or eliminating less than the others, check the function of the water bottle."

Guide p. 75

"Temperature is best regulated by having thermostatic control for each room. Use of zonal control for multiple rooms can result in temperature variations between the 'master-control' animal room and the other rooms in the zone because of differences in animal densities within the rooms and heat gain or loss in ventilation ducts and other surfaces within the zone."

The Kell 2nd Floor Facility has zonal temperature control, but the "master" controls are in the corridors (where animals are not housed) so that the number of animals in the "master" control room doesn't affect the other rooms. Since the facility was opened temperatures have been controlled within the required 5% fluctuation.

## ASSURANCE STATEMENTS

- 1) Professionally acceptable standards governing the care, treatment, and use of animals, including appropriate use of anesthetic, analgesic, and tranquilizing drugs, prior to, during, and following actual research, testing, surgery, or experimentation were followed by this research facility.
- 2) Each principal investigator has considered alternatives to painful procedures.
- 3) This facility is adhering to the standards and regulations under the Act, and it has required that exceptions to the standards and regulations be specified and explained by the principal investigator and approved by the Institutional Animal Care and Use Committee (IACUC). A summary of all such exceptions is attached to this annual report. In addition to identifying the IACUC-approved exceptions, this summary includes a brief explanation of the exceptions, as well as the species and number of animals affected.
- 4) The attending veterinarian for this research facility has appropriate authority to ensure the provision of adequate veterinary care and to oversee the adequacy of other aspects of animal care and use.
